NATURAL ENVIRONMENT RESEARCH COUNCIL

POLAR SCIENCE
FOR PLANET EARTH

Research themes

- Diverse questions about ecology & life history
- Roles of competition and habitat/diet specialisation in structuring seabird communities
- Intrinsic and extrinsic drivers of movements, behaviour, physiology, life history
- Conservation esp. impacts of fisheries & changing environment
- Pollutants
- Results to:
 - international treaties (esp. ACAP)
 - NGOs (BirdLife, IUCN)
 - RFMOs (ICCAT, IOTC, CCSBT) and national fisheries bodies

Data collection

- Long-term annual monitoring
 - Population trends
 - Breeding success
 - Individual breeding histories
 - Demography
 - Breeding chronology
 - Diet (conventional, SIA, genetics)
 - Provisioning rates
 - Chick growth
- Habitat use (tracking, SIA)
- Population genetics
- Pollutants

Research themes

- Diverse questions about ecology & life history
- Roles of competition and habitat/diet specialisation in structuring seabird communities
- Intrinsic and extrinsic drivers of movements, behaviour, physiology, life history
- Conservation esp. impacts of fisheries & changing environment
- Pollutants
- Results to:
 - international treaties (esp. ACAP)
 - NGOs (BirdLife, IUCN)
 - RFMOs (ICCAT, IOTC, CCSBT) and national fisheries bodies

Albatross population trends at Bird Island

- South Georgia population is 18% of global total; 61% of South Georgia population breeds at Bird Island

Albatross population trends at Bird Island

Black-browed Albatross breeding population at Bird Island

Source: British Antarctic Survey

Grey-headed Albatross breeding population at Bird Island

Research themes

- Diverse questions about ecology & life history
- Roles of competition and habitat/diet specialisation in structuring seabird communities
- Intrinsic and extrinsic drivers of movements, behaviour, physiology, life history
- Conservation esp. impacts of fisheries & changing environment
- Pollutants
- Results to:
 - international treaties (esp. ACAP)
 - NGOs (BirdLife, IUCN)
 - RFMOs (ICCAT, IOTC, CCSBT) and national fisheries bodies

Niche partitioning from SIA

- Model annual variation in chick SI ratios in relation to krill availability, environmental change etc.

- Test correspondence with breeding success

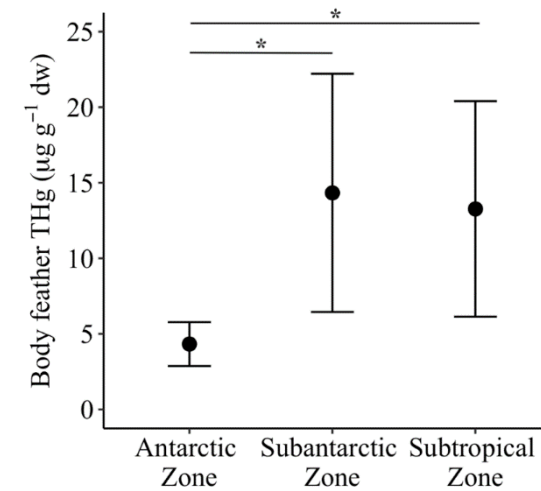

Research themes

- Diverse questions about ecology & life history
- Roles of competition and habitat/diet specialisation in structuring seabird communities
- Intrinsic and extrinsic drivers of movements, behaviour, physiology, life history
- Conservation esp. impacts of fisheries & changing environment
- Pollutants
- Results to:
 - international treaties (esp. ACAP)
 - NGOs (BirdLife, IUCN)
 - RFMOs (ICCAT, IOTC, CCSBT) and national fisheries bodies

Long-term changes in mercury contamination in relation to nonbreeding distribution & breeding success

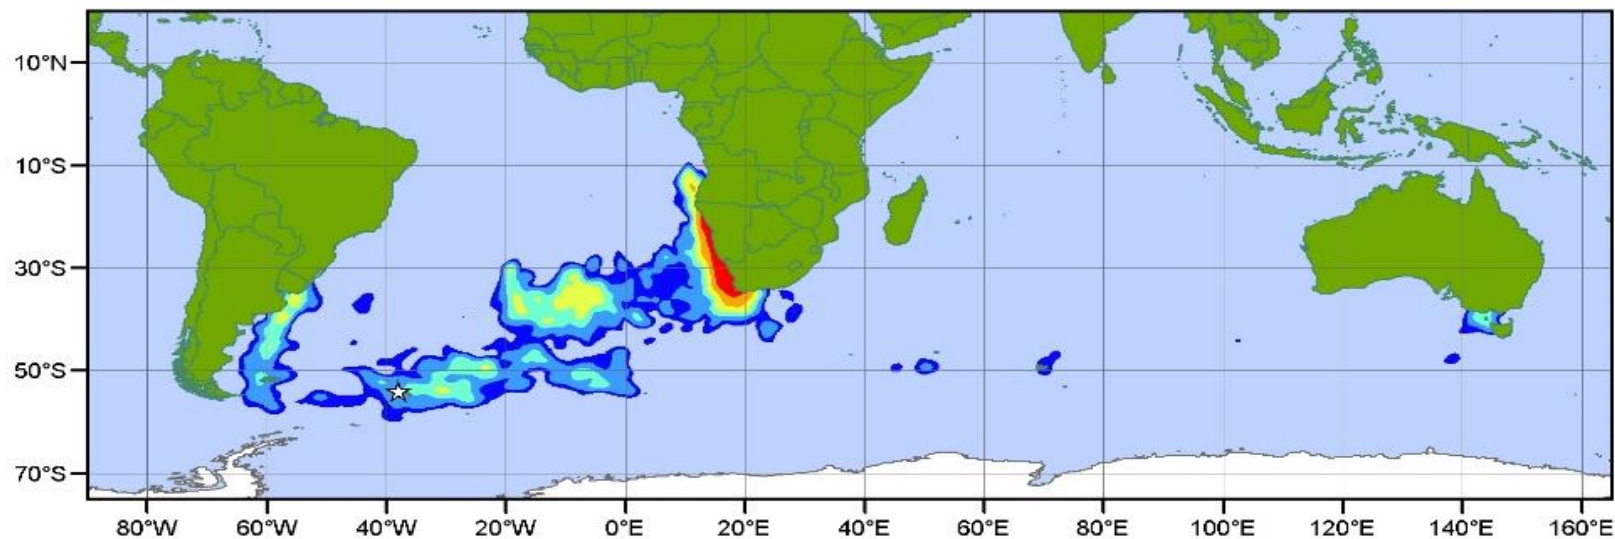

- Increase since 1990s in Hg. Highest levels in feathers grown in subantarctic and subtropical waters
- Mercury levels higher in male grey-headed albatrosses that failed

Research themes

- Diverse questions about ecology & life history
- Roles of competition and habitat/diet specialisation in structuring seabird communities
- Intrinsic and extrinsic drivers of movements, behaviour, physiology, life history
- Conservation esp. impacts of fisheries & changing environment
- Pollutants
- Results to:
 - international treaties (esp. ACAP)
 - NGOs (BirdLife, IUCN)
 - RFMOs (ICCAT, IOTC, CCSBT) and national fisheries bodies

Tracking: compare migration and fisheries overlap of fledglings and adults

Effects of changing wind patterns on foraging of albatrosses

- Adult foraging trips
 - GPS logger
 - Accelerometer
 - Immersion logger
 - 3-axis magnetometer
 - Heart-rate logger
- Chick mass changes
 - Growth rates
 - Meal mass
 - Feeding frequency

Accelerometer + Magnetometer

Two flight modes as seen in ~ 45 seconds of sensor data

Flapping Flight

Dynamic Soaring

Relate flight mode to energy expenditure

Research themes

- Diverse questions about ecology & life history
- Roles of competition and habitat/diet specialisation in structuring seabird communities
- Intrinsic and extrinsic drivers of movements, behaviour, physiology, life history
- Conservation esp. impacts of fisheries & changing environment
- Pollutants
- Results to:
 - international treaties (esp. ACAP)
 - NGOs (BirdLife, IUCN)
 - RFMOs (ICCAT, IOTC, CCSBT) and national fisheries bodies

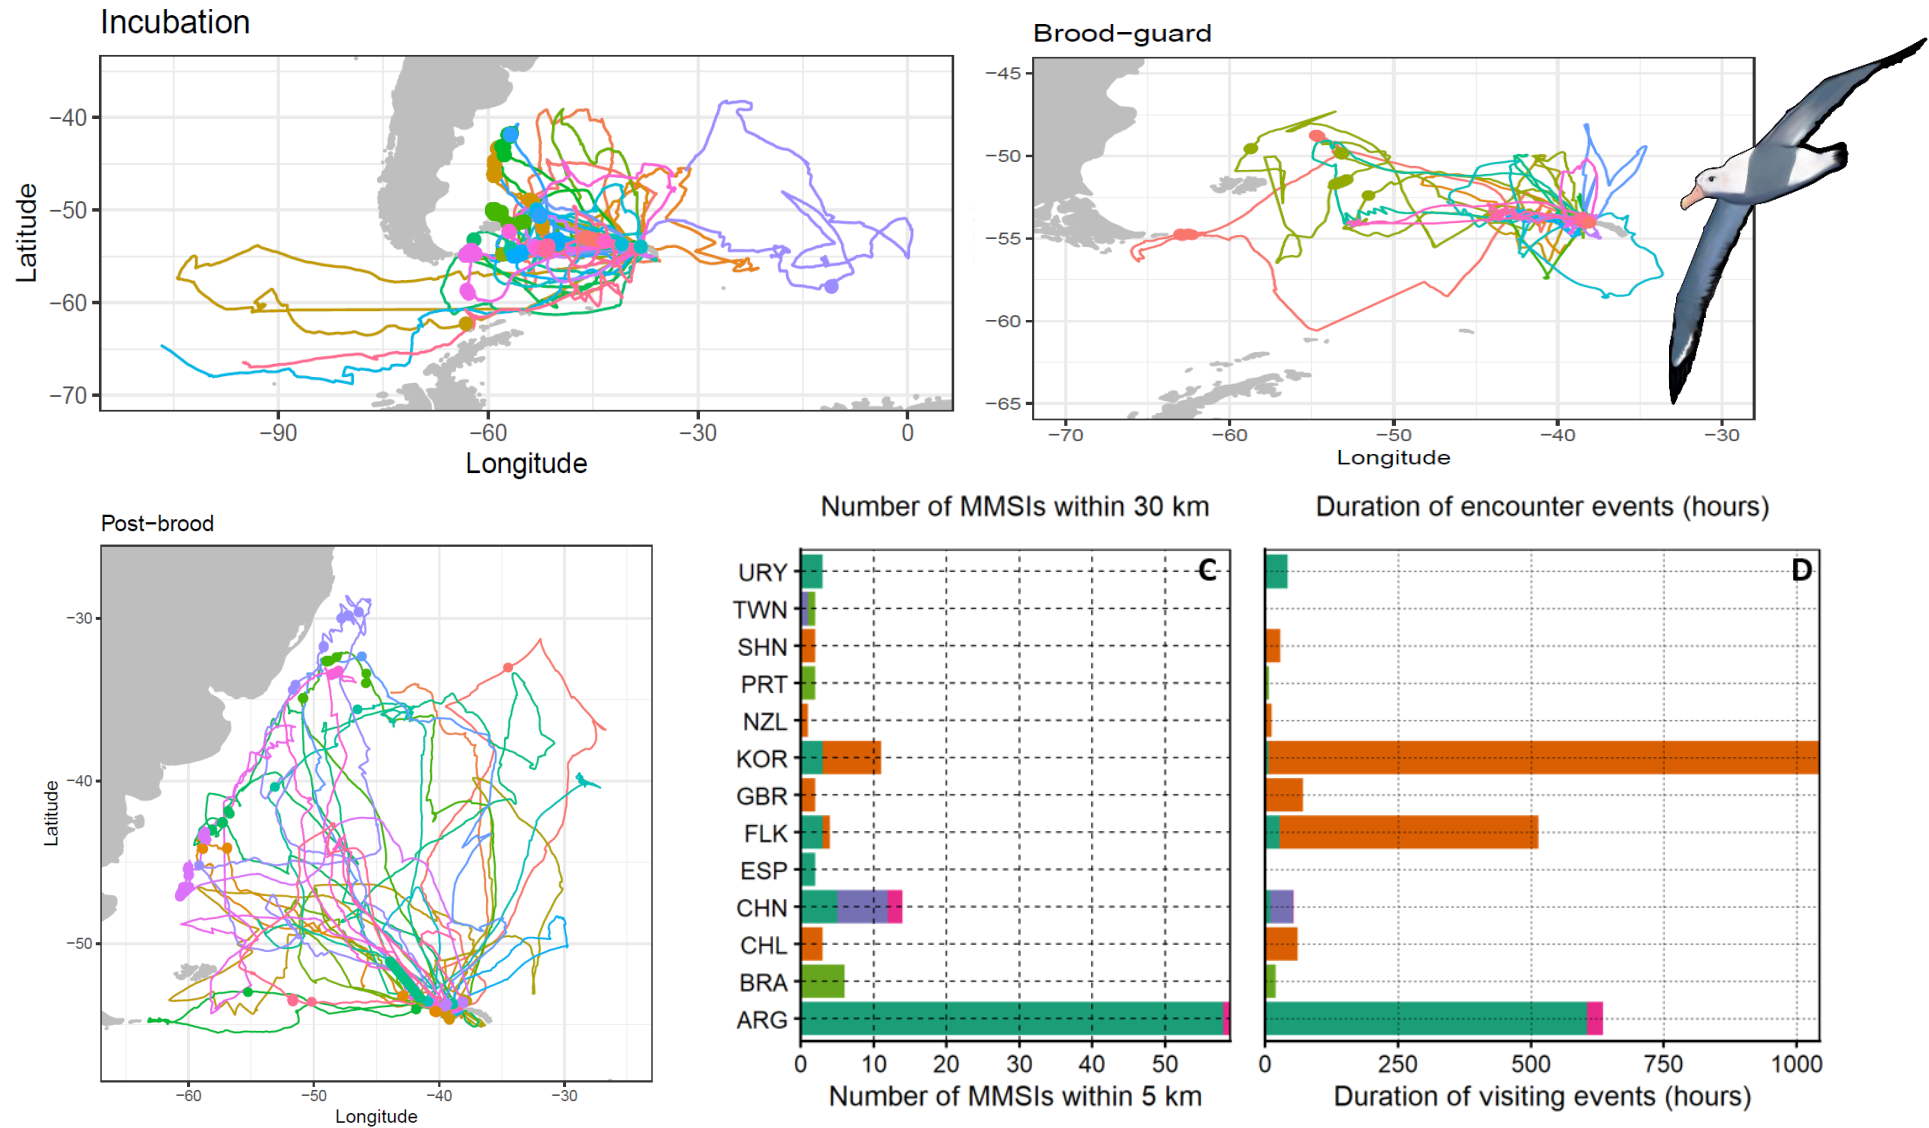

Seabird sentinels: mapping fine-scale bycatch risk using bird-borne radar-GPS loggers

- Understand fine-scale vessel interactions
- Detect legal and undeclared/IUU vessels (radar & GFW AIS data)
- Analyse habitat preference (GPS data)
- Test for signature of vessel association from movements and flight/landing pattern (from immersion loggers)

Seabird sentinels: mapping bycatch risk

Dots are ship radar detections

Thanks to: Numerous fieldworkers, PhD students, postdocs., national and international collaborators

Judith Brown

Spatial Segregation of Wandering Albatrosses at South Georgia

Victoria Warwick-Evans, Lizzie Pearmain,
Andy Wood, Richard Phillips

Introduction

Globally threatened

Bycatch

Variable rates of decline

At-sea interactions

Tracking only from Bird Island

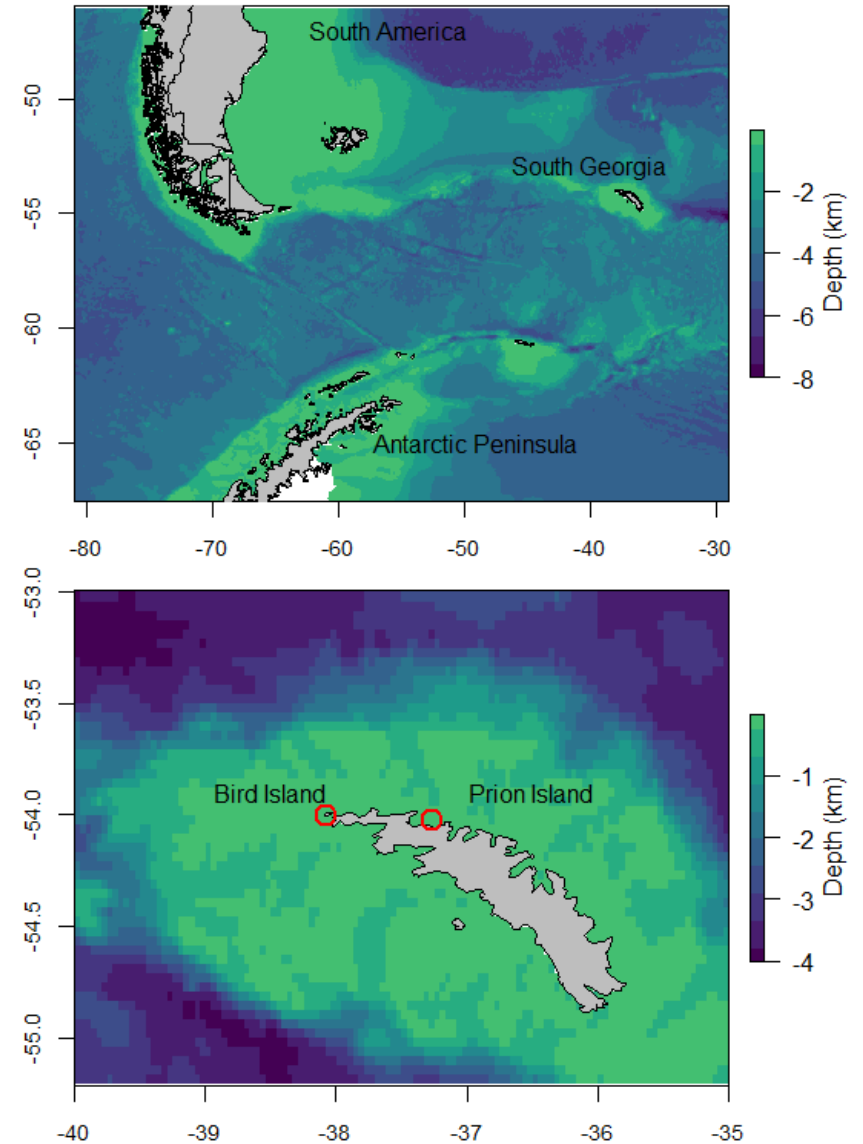

Conservation implications

Methods

Data collection

- Two colonies
- Deploy PTTs and GPSs
- Breeding adults
- Jan - Jul
- Geolocators

Methods

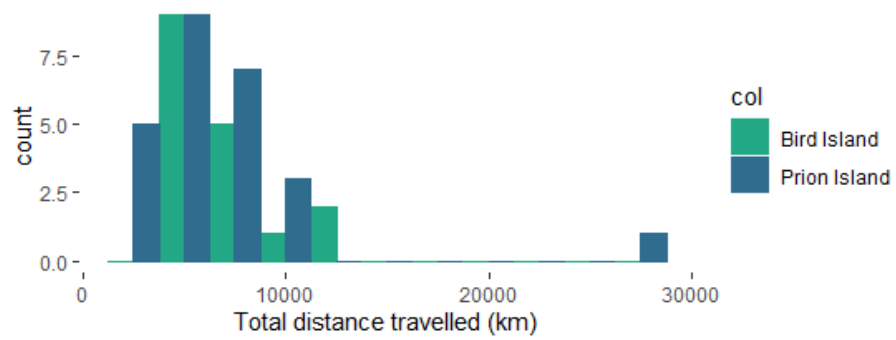

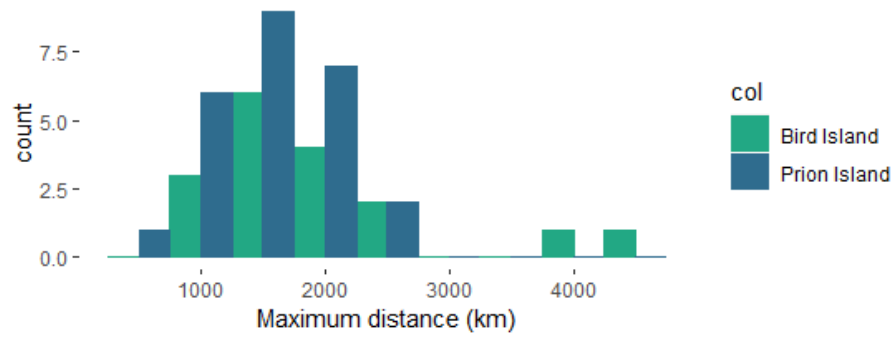

Data processing and analyses

- GPS and PTT 1hr - crawl
- Kernel Density
- Population overlap
- Wind direction at colony departure
- Habitat characteristics
- Overlap with fisheries

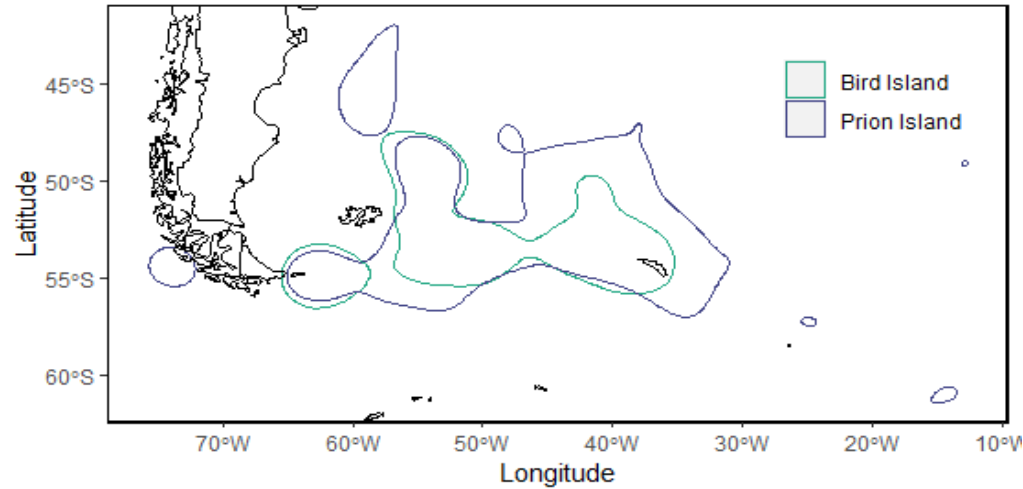

Results tracks

Incubation

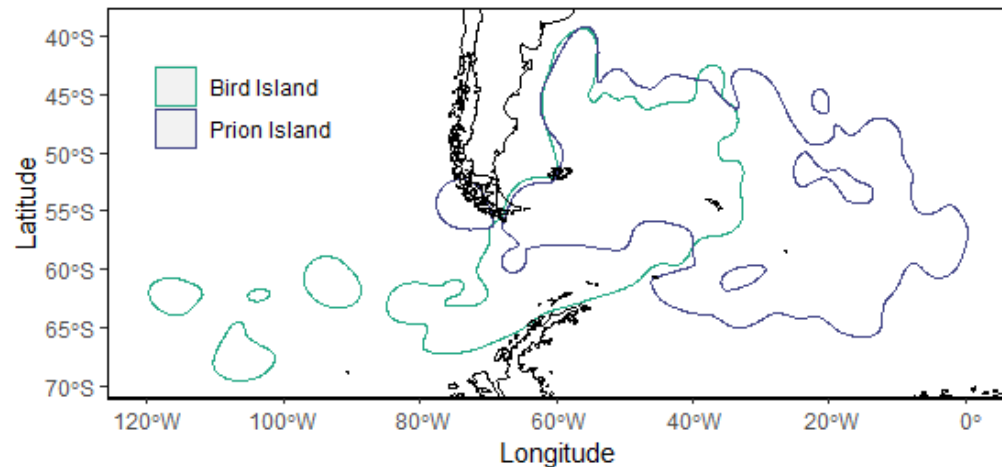

Results kernel density

Core foraging area (50 %)

Home range (95 %)

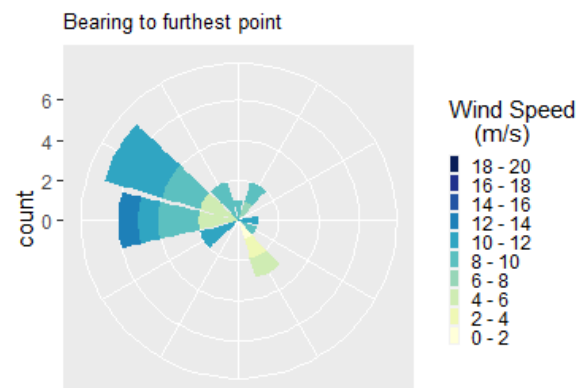

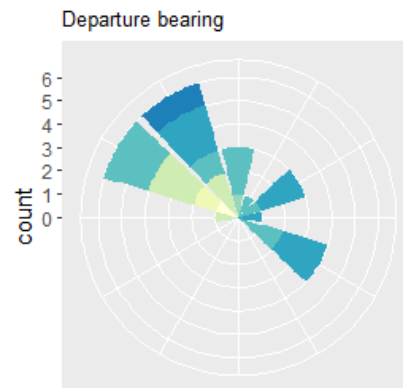

Bhattacharyya affinity

UD	Sample	Randomised	p
50 %	0.35	0.38 ± 0.03	0.17
95%	0.69	0.77 ± 0.03	0.005

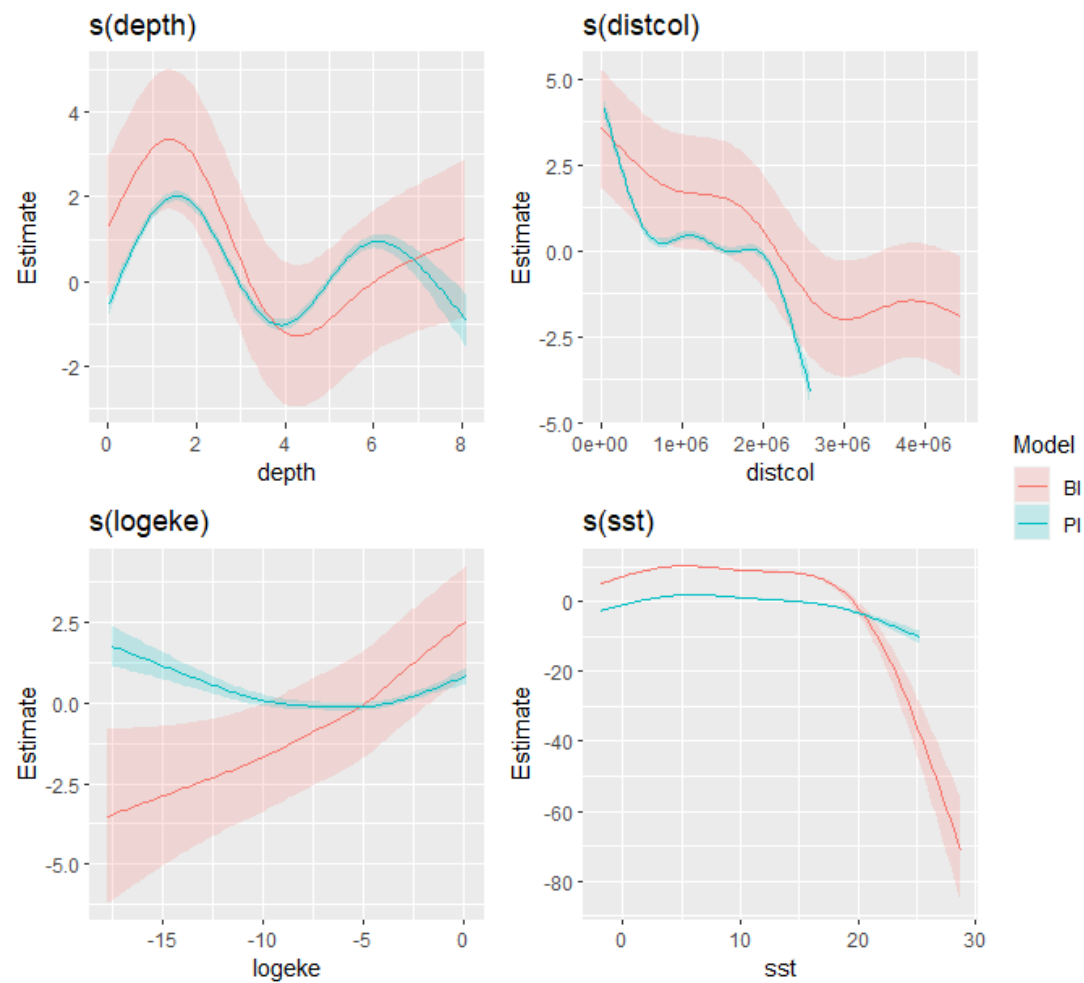

Conclusion

- No difference in the core foraging area
- Significant difference in home range

Results wind

Results habitat models

Results Fisheries overlap

All fishing

Bird Island

Prion Island

Conclusions

- Significant differences in home range
- Unclear what causes population segregation
- Birds breeding at Bird Island have higher overlap with all types of fishery
- Birds from Bird Island more threatened by fishery
- Explains faster rate of population decline at Bird Island than at Prion Island

Results

Welcome to MAPPPD, Version 3.0

Last updated: April 2, 2019

For best performance, use [Google Chrome](#)

The MAPPPD project aims to deliver **open access** penguin population data for the Antarctic continent, and occupancy probabilities for flying birds around the Antarctic Peninsula.

Check out our [White Paper](#) describing the MAPPPD application.

Our database currently contains 3743 records of colony counts from 117 sources and 662 sites around the Antarctic.

[Download the full site list](#)

MAPPPD contains counts for these species:

Adélie	1434
Chinstrap	957
Gentoo	1112
Emperor	240

MAPPPD metadata can be viewed [ON OUR METADATA PAGE](#)

Explore the data by clicking on one of the search tools below the map to begin.

By accessing MAPPPD you agree to the [Terms of Use](#)

Populations unstable

Populations stable

Populations stable
(apart from eruptions)

Take homes

- Still more scope for time lapse monitoring of seabirds, seals.
- Replication is good, but we need reference sites (eg South Coast).
- MAPPPD is adding phenology
- We need a combined platform for imagery, especially aerial survey
- We probably need combined survey effort for penguins, flying seabirds and seals.

Initiating Monitoring Support for the SGSSI-MPA Research and Monitoring Plan

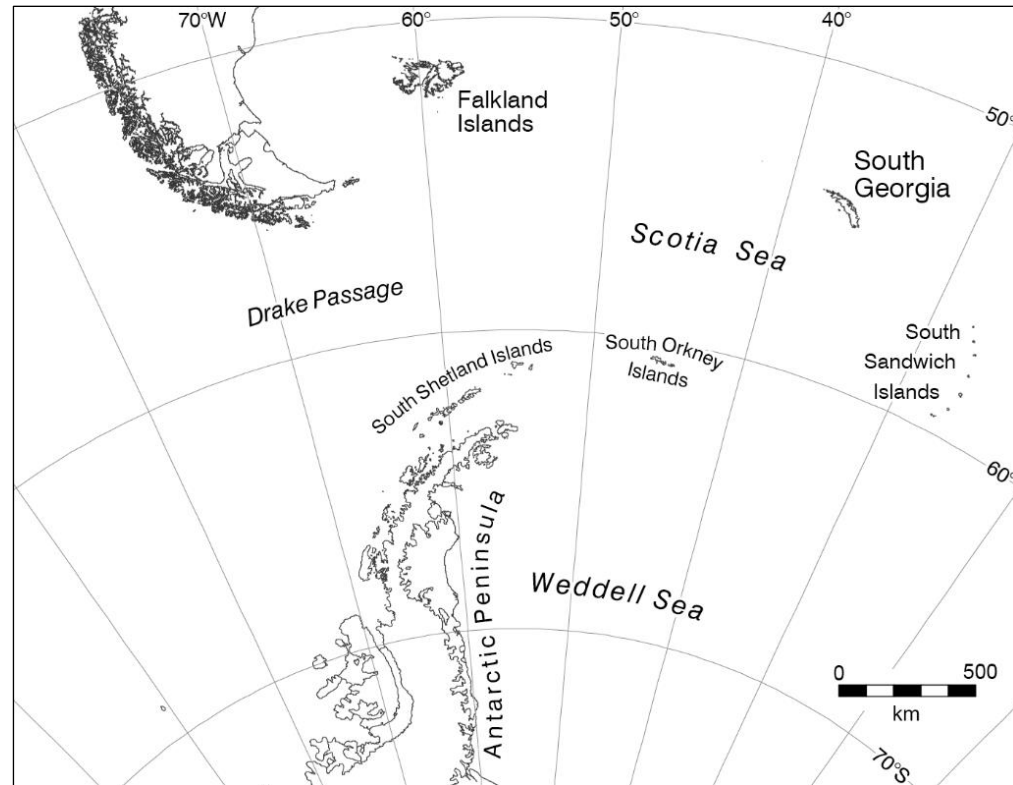

POLAR SCIENCE
FOR PLANET EARTH

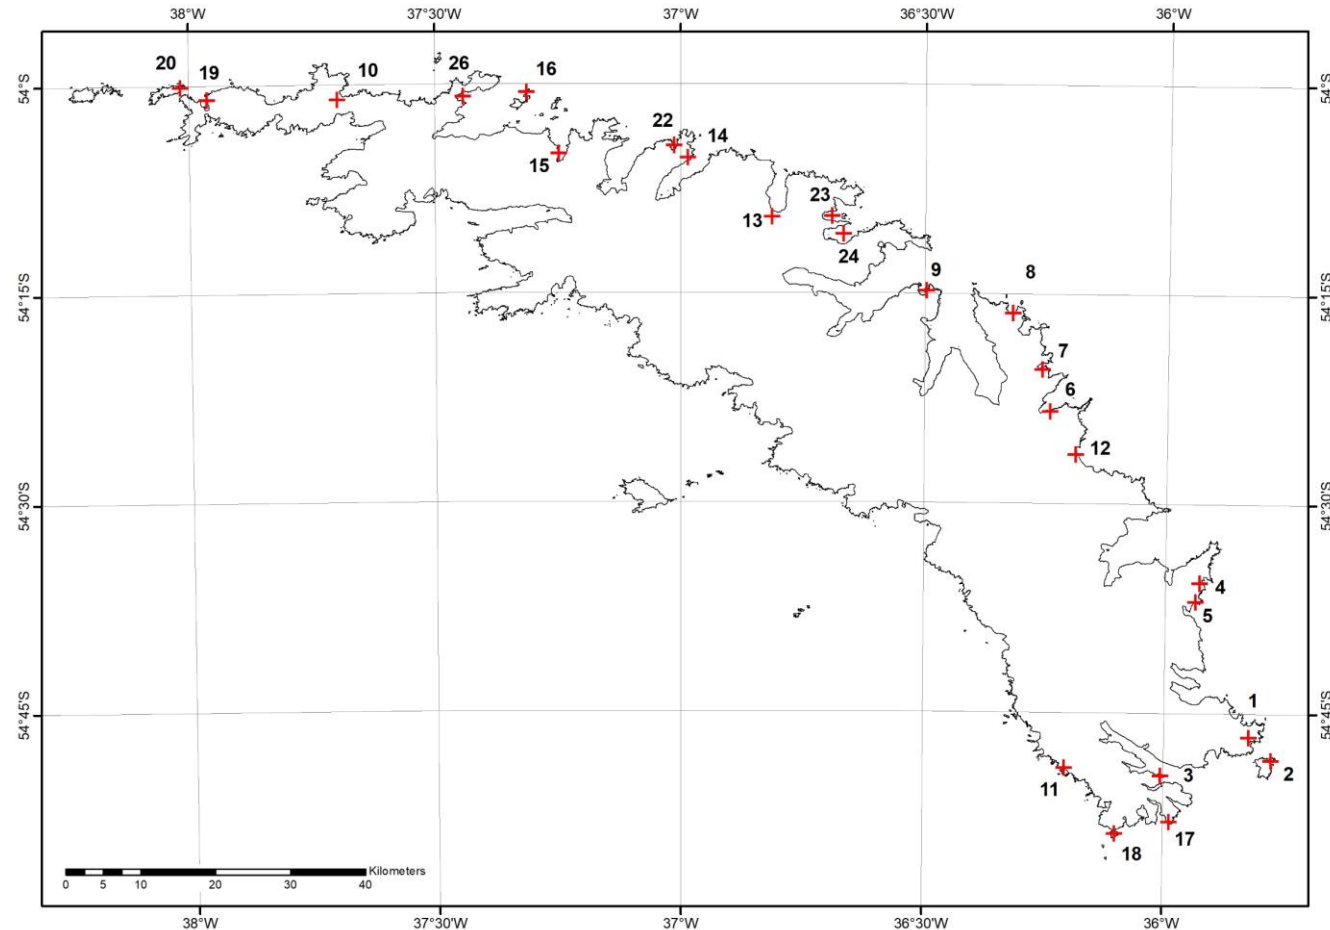

Initiating Monitoring Support for the SGSSI-MPA Research and Monitoring Plan

- South Georgia's environment is currently in a state of flux with the impacts of the krill fishery, rat / deer eradication and wider climate change not fully understood.
- Leverage remotely piloted aircraft systems (RPAS) to undertake a baseline reference survey of key indicator species around South Georgia.
- Develop a methodology by which this can be undertaken on a regular basis in the future.
- Data collected to be submitted into CCAMLR and to help inform GSGSSI's conservation of South Georgia.
- Phil Trathan, Phil Hollyman, Martin Collins, Adrian Fox, Jamie Coleman and Nathan Fenney.

Initiating Monitoring Support for the SGSSI-MPA Research and Monitoring Plan

- 26 target sites across three periods (December 2021, January 2022 and October 2022).
- Target species:
 - Elephant seals
 - Fur seals
 - Wandering albatross
 - King penguins
 - Gentoo penguins
 - Macaroni penguins
 - Chinstrap penguins
- Fixed-wing SenseFly eBee X RPAS platform.

Target field sites for Darwin Plus 109 project.

Baleen whale recovery and habitat use in South Georgia waters

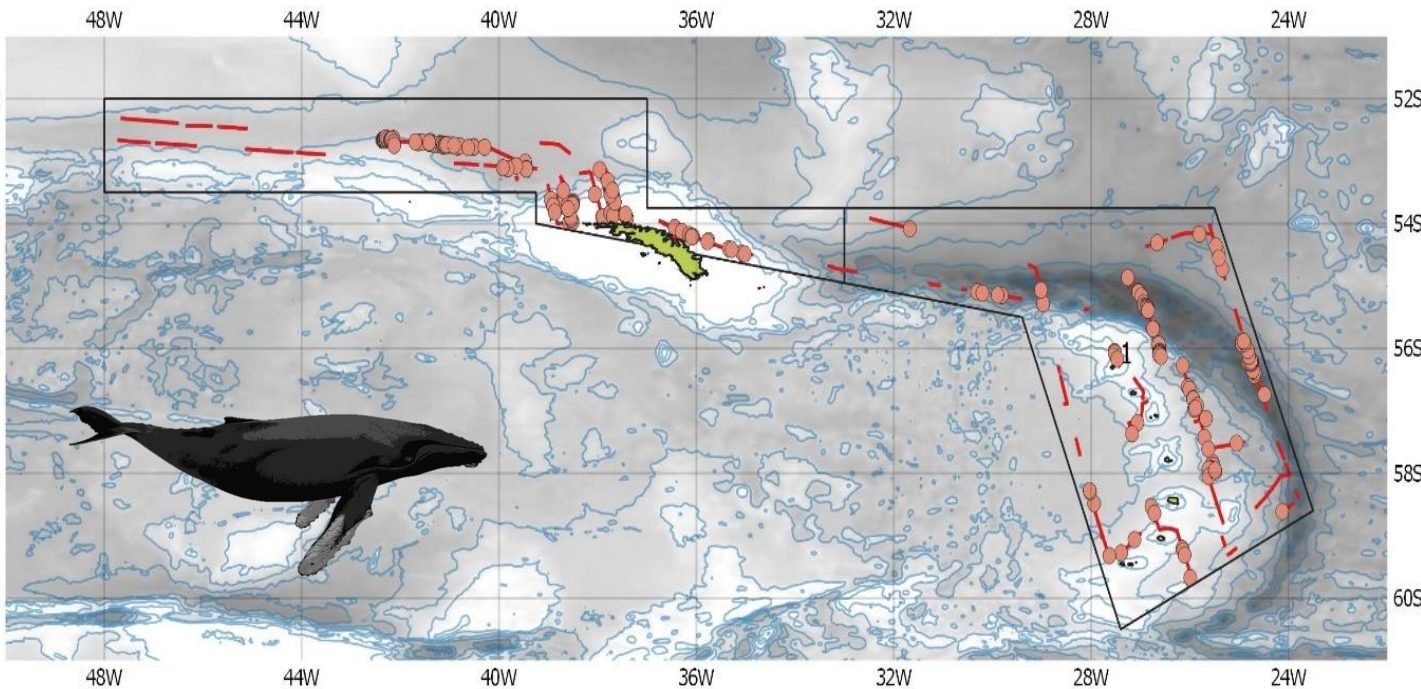

Jen Jackson & Stephanie Martin

Image: John Dickens

Humpback whales nearly recovered from whaling in Scotia Arc

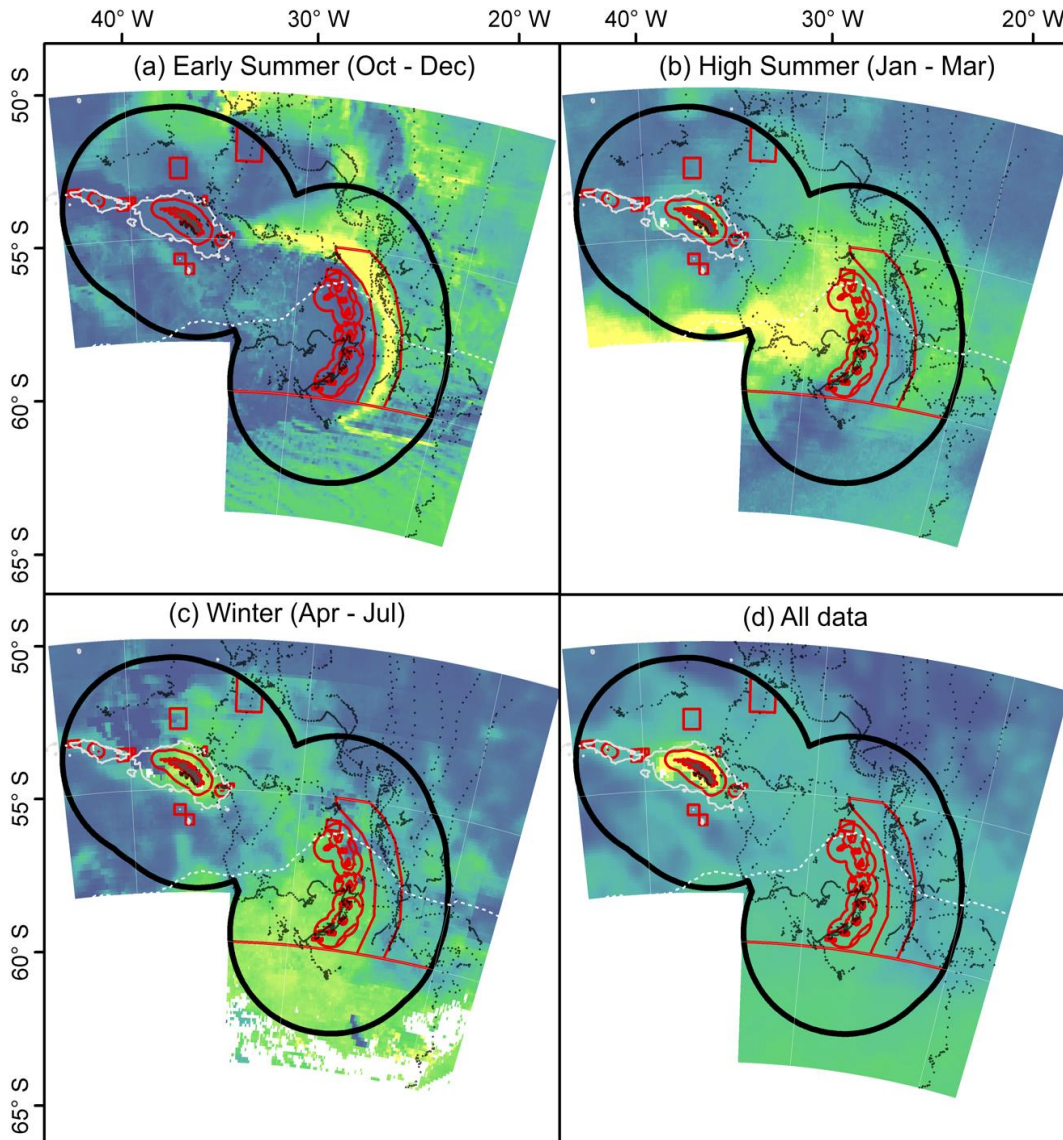

Humpback whale abundance: >24,000 whales
 Very close to pre-whaling abundance estimates
 Full recovery from exploitation?

Region	Humpback abundance	95% Confidence Interval	Baleen whale abundance	95% Confidence Interval
South Georgia	12,103	7,145 - 20,499	30,905	22,361 - 42,713
South Georgia + South Sandwich Islands	23,759	13,010 - 43,663	43,824	33,509 - 59,077
Scotia Arc	24,543	14,863 - 40,528		

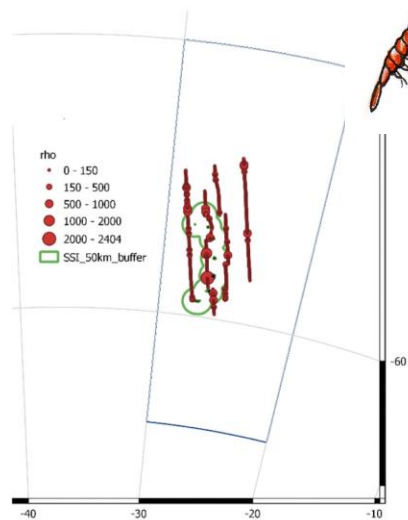

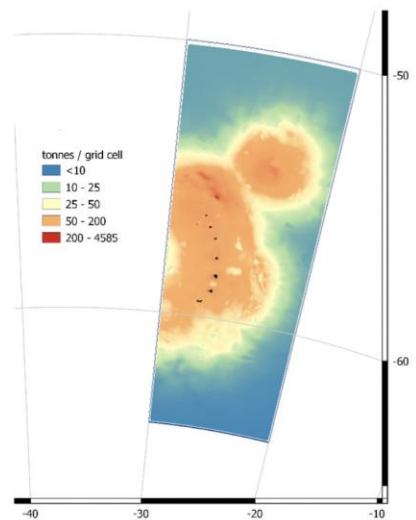

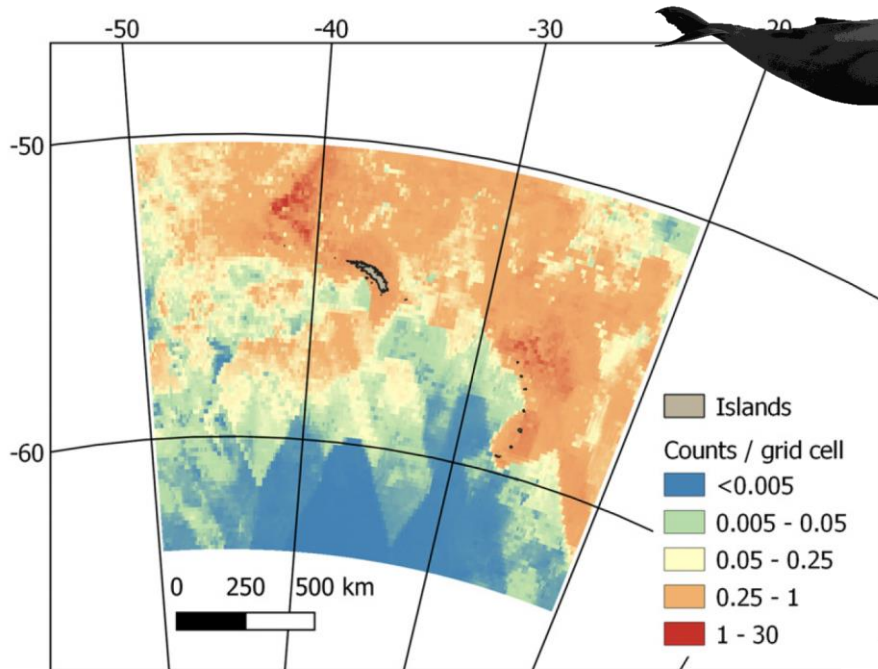

Identifying Scotia Arc humpback whale hotspots by tracking whales

- 16 whales tracked
- Satellite tracks and observations indicate a predominantly coastal distribution at South Georgia and the South Sandwich Isl
- Whale movements broadly towards South Georgia in summer, then easterly during autumn

Habitat and prey preferences of Scotia Arc humpbacks

- Strongest predictive model of humpback density combines krill biomass with sea surface temperature, shelf break distance and current velocity at 1° grid scale
- Krill densities of $>150\text{gm}^{-2}$ positively correlated with humpback density
- Total estimated annual krill consumption by baleen whales in SG & SSI = **4.8-7.2 million tonnes**

40°W 20°W 0°

Historical catches: SRW use multiple feeding areas

Image:
González Carman et al. 2019

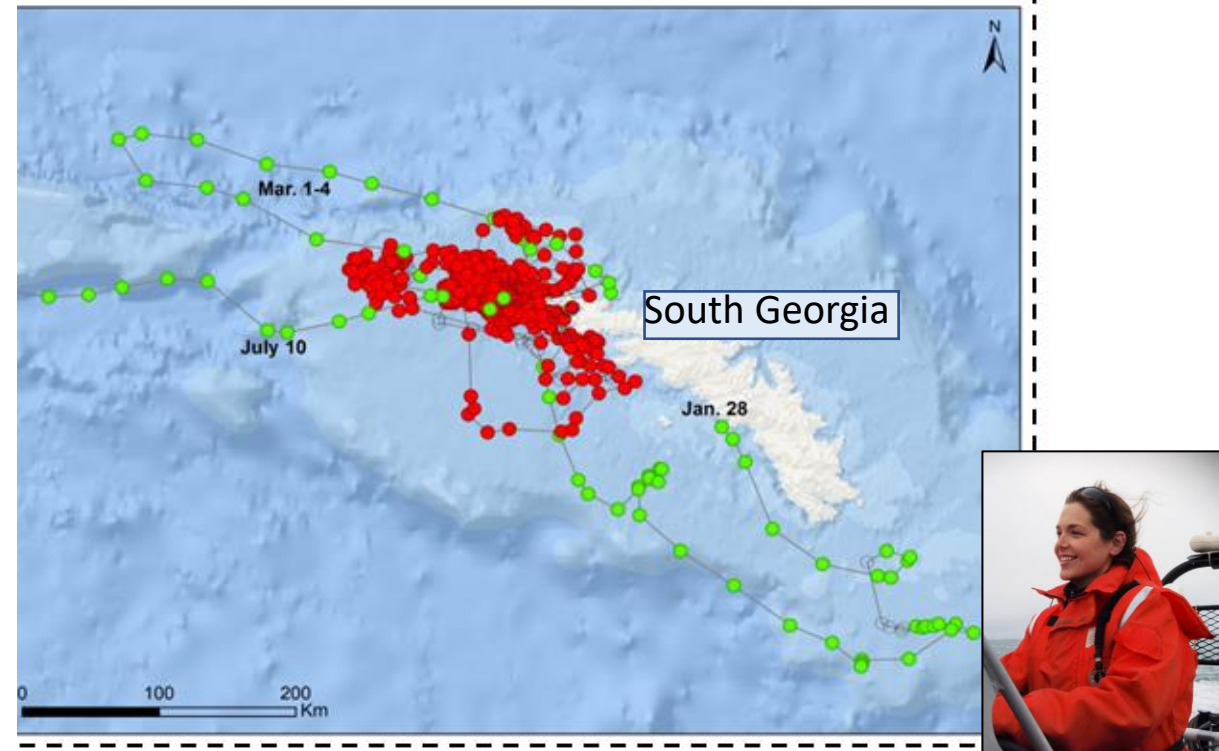

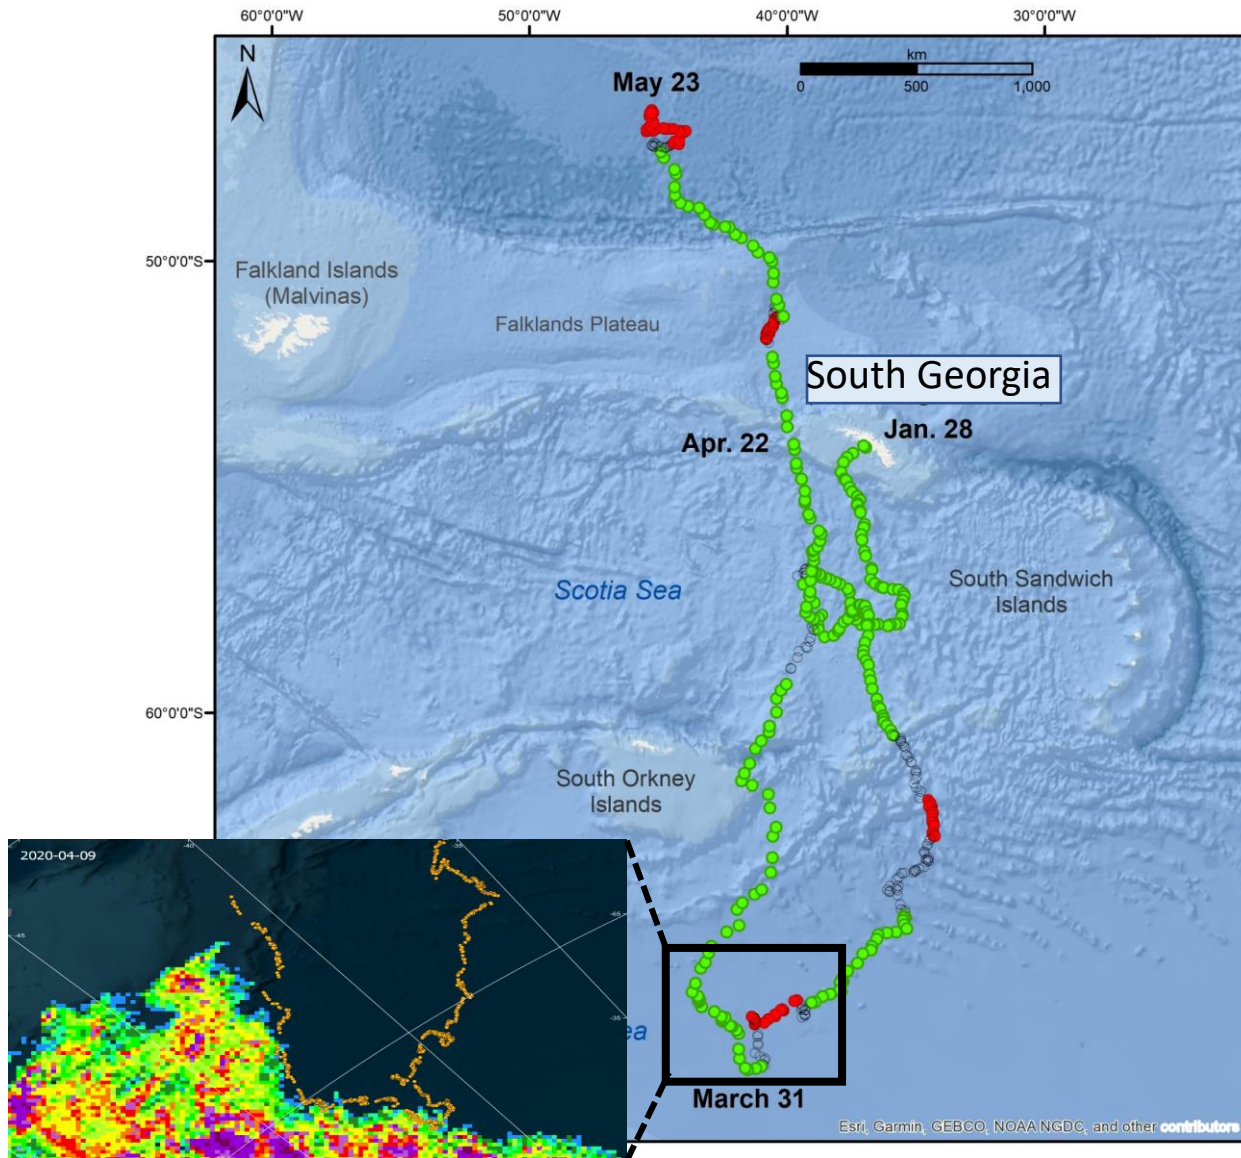

Hunted since the 1600s

Occurrence at South Georgia varies between years

Where do southern right whales feed?

- South Georgia temporary feeding area within broader feeding range for some individuals
- Other individuals may feed locally for many months, including winter

Sea ice edge

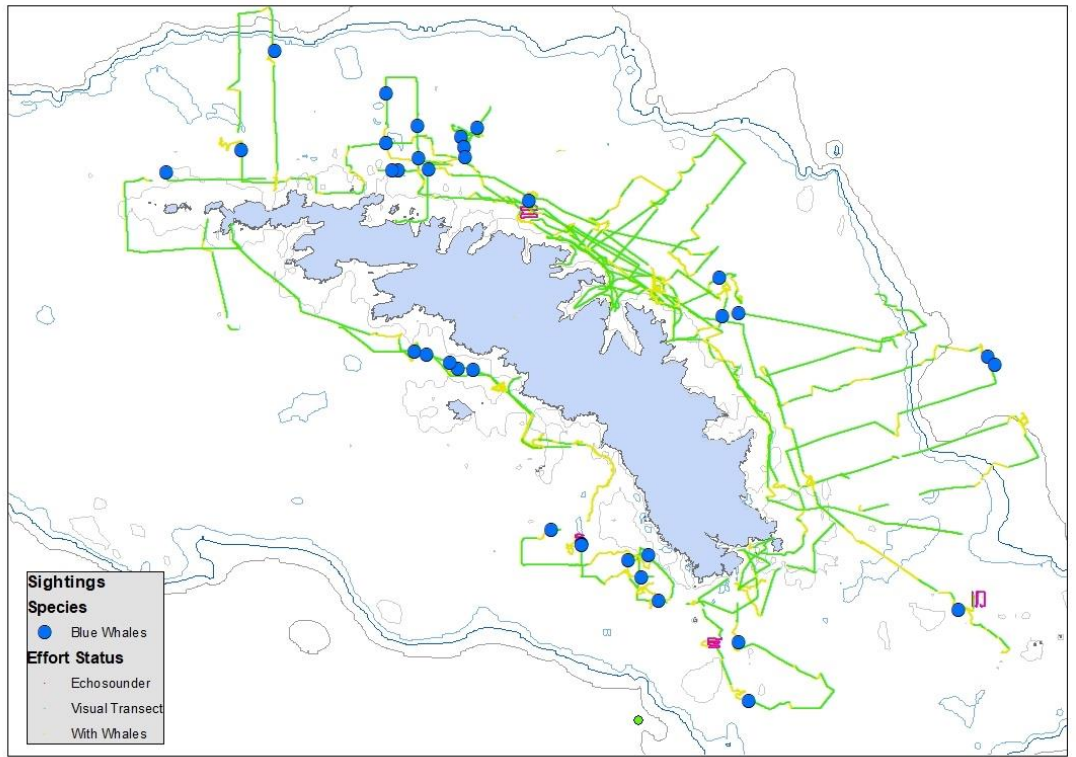

Habitat preferences of right whales

- Southern right whale observations and satellite tracking suggest right whales regularly feed west of South Georgia
- Opportunistic Bird Island observations agree
- Linking sighting reports to the Southern Annular Mode suggests contrasting right and humpback distributions at South Georgia

Whale density predictions at SAM0

Fin whale distribution in the Scotia Arc

Q1
Jan - Mar

Q2
Apr - May

Q4
Oct - Dec

South Georgia

South Orkneys

- >87,000 fin whales caught at South Georgia

BUT

- Highest summer fin whale densities in South Orkneys
- Low densities at South Georgia in summer
- Distribution shift further south?
